

BOLE

Example: NMA(2)

- Model parameters vs discrepancy with GP
- Find parameter values that minimize discrepancy function
 - Black-box optimization
 - Acquisition strategies balance exploration and exploitation

BOLFI

Example : MA(2)

- Model parameters vs discrepancy with GP
- Find parameter values that minimize discrepancy function
 - Black-box optimization
 - Acquisition strategies balance exploration and exploitation

BOLFI

Example : MA(2)

- Model parameters vs discrepancy with GP
- Find parameter values that minimize discrepancy function
 - Black-box optimization
 - Acquisition strategies balance exploration and exploitation

$$p(y \mid \theta) \approx p(||y^{\text{obs}} - y|| < \epsilon \mid \theta)$$
